DIMAS EKA ADINANDRA

SOFTWARE ENGINEER

+62 81232066507 | Indonesia | dimasekaadinandra@gmail.com | linkedin.com/in/dimas-eka-adinandra/

SUMMARY

Backend Software Engineer with 4+ years of experience building scalable, production-grade systems, from RESTful APIs and microservices to real-time voice processing pipelines, billing platforms, and healthcare systems. Specialises in Go (primary), Python, PHP, and TypeScript, with a strong focus on clean architecture (Repository Pattern, Hexagonal Architecture), query performance optimisation, and service reliability. Experienced in integrating payment gateways and AI features such as RAG and emotion recognition into production workflows across fintech, healthcare, and call-operation products.

TECHNICAL SKILLS

Languages: Go (Golang), Python, PHP, TypeScript, JavaScript
Frameworks & Libraries: Echo (Go), Laravel, HonoJS, AngularJS, gRPC
API & Architecture: RESTful API, Microservices, Repository Pattern, Monolithic and Hexagonal Architecture
Databases: PostgreSQL, Mysql, MongoDB, Redis
Tools: Docker, Git, CI/CD
Practices: Database Query Optimisation, Concurrent Processing, Unit & Integration Testing, Code Review
Integrations: Payment Gateway APIs, RAG Pipelines, AI Workflow Automation

PROFESSIONAL EXPERIENCE

Backend Developer | Venturo (Contract) | Malang **Jul 2024 - Present**

- Designed and maintained systems across the full software development lifecycle, from system design and API architecture to production monitoring and long-term maintenance.
- Architected and shipped RESTful APIs and microservices using Go and Echo, reducing average API response time by ~20% through PostgreSQL query tuning, indexing strategies, and efficient data access patterns.
- Increased system throughput by ~15% by implementing concurrent processing and optimising resource utilisation across multiple backend services.
- Applied clean architecture principles (Repository Pattern, Hexagonal Architecture) to keep codebases modular, testable, and maintainable as products scaled across 3 concurrent active projects.
- Integrated third-party systems including RAG pipelines and payment gateway APIs, enabling AI-powered features and secure payment flows.
- Led code reviews and enforced coding standards across 3 concurrent active projects, improving team consistency and reducing review cycle time.

Backend Developer | Cavos (Call Operation Platform with AI) | Jakarta, Indonesia **Jan 2026 - Oct 2026**

- Designed and implemented a centralized activity logging system to capture and track user and system activities across applications, improving auditability, troubleshooting, and operational visibility.
- Designed and developed a billing system, supporting usage tracking, billing workflows, and integration with backend services to enable scalable and reliable payment operations.
- Built an emotion recognition feature for an automated QA workflow, enabling ~60% of customer interactions to be reviewed without manual effort and surfacing service-quality issues faster.
- Designed and deployed a Retrieval-Augmented Generation (RAG) system for internal documents, delivering context-aware answers with ~70% accuracy on evaluation tests.

Backend Developer | Kementerian Kesehatan RI (Badr Healthcare Management System) | Jakarta, Indonesia **Aug 2025 - Dec 2025**

- Developed backend services for vaccine scheduling and inventory management, supporting patient data workflows and healthcare logistics at scale.
- Established consistent API contracts across system components to ensure reliable service communication and future extensibility.

Full Stack Engineer | NU CARE LAZISNU (Donation & Payment Platform) | Jakarta, Indonesia **Jul 2024 - Aug 2025**

- Built a microservices-based backend in Go to handle donation transaction processing, service orchestration, and cross-service data consistency across 5+ independent services.
- Designed and implemented clean API contracts for payment integrations and inter-service communication, ensuring reliability and maintainability.
- Integrated third-party payment gateway APIs to enable secure, reliable payment flows, supporting multiple payment methods and real-time transaction status updates.

Backend Developer | Aitindo (Contract) | Tangerang, Banten, Indonesia **Nov 2022 - Jun 2024**

- Built backend systems from the ground up, covering database schema design, REST API architecture, and automated CI/CD deployment pipelines, supporting a team of 3+ engineers.
- Developed and shipped new features aligned with product roadmap requirements, collaborating with the product team and frontend engineer.
- Integrated third-party payment gateway APIs to support secure in-app transactions.
- Diagnosed and resolved critical production bugs, improving system uptime and reducing error rates by ~35% across core services.
- Developed an internal monitoring sub-application providing real-time observability into application health, performance, and error rates.

Backend Developer | PT Okejek Kreasi Indonesia | Malang, Indonesia **Feb 2022 - Nov 2022**

- Designed and built RESTful APIs for a high-traffic mobile application, improving code performance and reducing response latency through refactoring and query optimisation.
- Integrated third-party payment gateway APIs to process in-app transactions reliably.
- Implemented and shipped new features as part of a cross-functional team, following established coding standards and version control workflows.

EDUCATION

Diploma in Information Technology (D4) **2017 - 2021**

Politeknik Negeri Malang
